

TELEDYNE HASTINGS INSTRUMENTS

APPLICATION NOTES

Goal: Evacuation and Backfilling Lamp Production

SMS Technology, a manufacturer of lamp making equipment selected the Model 2002 due to its wide range control. Another like company selected the Model 2002 to replace a pirani gauge and a piezoresistive gauge. This selection was made for both the wide range and TTL control points. A third company who selected the Model 2002 did so due to the wide range and accuracy. Accurate measurements during the evacuation process permit better control during the back-fill operation.
