

TELEDYNE HASTINGS INSTRUMENTS

APPLICATION NOTES

Goal: Sputtering Chambers

The Virginia Polytechnic Institute selected the Model 2002 as a follow on to the first single thin film sensor instrument, the VI-2002. After four years of using the VI-2000 and the Model 2002, Virginia Tech views this new instrument as extremely reliable, stable, and able to stand up to very harsh treatment and applications. The Model 2002 has been chosen as the preferred vacuum sensing device due to its robust and versatile design. Other instruments have seen quick demise as compared to the “industry leader”, Hastings.
